

Waterless Urinals

Please Note:

The Department of Health has assessed purpose built waterless urinals and has no objections to the use of these types of products, provided that the urinals are cleaned and maintained in accordance with the manufacturers requirements.

Non-purpose built waterless urinals are intended to convert an existing water carriage urinal to waterless operation. In consideration of this, the Department of Health has no objections to the use of non-purpose built systems provided that:

1. The flushing system is not disconnected from any urinals in which the system is used.
2. The system is used in accordance with the manufacturer's instructions.
3. Urinals in which the system is used are cleaned and maintained in accordance with the manufacturer's recommendations.

Busselton Water has taken due care in the preparation of the information supplied on this sheet and does not recommend a preferred product or supplier.

The products listed do not reflect all products currently available on the market, and all prices quoted are for general information purposes only.
